Fowls are liable to be affected by a number of diseases and may also be in-fected by various kinds of parasites which live on the surface of the body

Inflammation.

The contagious diseases produced by animal and vegetable germs are the most important the poultryman has to consider in trying to keep his birds healthy. These germs and the parasites should be kept out preferably by preventive measures, although there are cases where medicines may be advantageously given. As a rule, however, it is better to kill sick fowls, the cost of treatment being greater than cost of treatment being greater than the value of the birds. Moreover, the spread of contaglous diseases is also there.

Starting Right.

Starting Right.

To start right, then, set eggs from a flock which has shown no indications of contagious disease for at least a year, avoid putting these eggs in packing such as chaff, etc., which may be musty or moldy; wipe them with a cloth wet in 70 or 80 per cent. alcohol and katch them in a thoroughly cleansed incubator. The young chicks should then be free from parasites and injurious germs of all kinds, and to keep them so put them in clean brooders and allow them to run only upon ground which has not been used for fowls for several years.

ground which has not been used for fowls for several years.

Should hens be used for hatching the chicks pick out those known to be healthy and dust well with lice powder before setting. Their nests should be perfectly clean, and there should be a box of road dust or sifted hard coal ashes under cover where they can dust themselves. When the young chicks are taken from the nest examine carefully for lice. These parasites accumulate under the throat and on the top and back of the head, and if any are found rub a little sweet oil, pure lard

and back of the head, and if any are found rub a little sweet oil, pure lard or vaseline with the finger over the parts where the lice are.

By thus starting a flock may be raised practically free from disease germs and parasites, but to keep germs and parasites from developing and increasing to a dangerous extent, the hens must be kept clean the drinking fountain and feed troughs washed every day or two with boiling water, and if and mites are found on the birds or in their houses, the rooses and adjoining their houses, the rooses and adjoining parts of the walls should be sprayed with a good disinfectant used in con-nection with freshly slaked lime.

FERTILIZERS AND GREEN MA NURE CROPS

Cheap Insurance Against Poor Crops

C. A. MOOERS, Tennessee Experiment Station.

As an all round means of soil imt no other material equals Frequently, however, people manure. Frequently, however, people want to know what to use to supplement insufficient supply of manure. If nothing be known about the special needs of the soil use a high grade complete fertilizer, such as truck growers make. One thousand or 1,500 pounds per acre is not too much, and this amount may be applied broadcast and mixed throughout the soil. However, a part may be saved for the row or in the hill for crops like potatoes, tomatoes, etc.

But will even 1,500 pounds per acre of high grade complete fertilizer build up the fertility of soil? The answer is quite simple. Fifteen hundred pounds of fertilizer contain several times the phosphoric acid removed by a heavy crop of vegetables, and the unused por-tion will remain in soil for the benefit of succeeding crops. The supply of

comparison of the proportions of plant food elements present in fer-tlizers with those found in crops will make this point clear. Take corn, for example. In mature plants for every ten pounds of phosphoric acid are found twenty-three pounds of pit-agh and thirty-two pounds of nitrogen ase found twenty-three pounds of pot-aseh and thirty-two pounds of nitrogen, but in a common brand of trucker's fertilizer for every ten pounds of phos-phoric acid are four pounds of potash and only three and one-third pounds of nitrogen. Thus 1.500 pounds of such fertilizer does not contain as much ni-trogen as required in the production of a forty husbel corn crop and less of a forty bushel corn crop and less than one-third the amount removed by

ulpholac Removes Dandruff

This scientific remedy removes dandruff, stops all itching and restores the scalp to a natural, health state. SULPHOLAC is the most efficient remedy because of its scientific origin, containing a well-balanced combina-tion of the most highly prized skin benefactor and germ destroyer known to medical science

Entirely free from alcohol, which parches and dries the scalp and impove ishes the hair. SULPHOLAC scothes and heats the scalp, keeps it fresh, cool and moist.

Physicians prescribe it. Ask for SULPHOLAC at your druggists, 500 for a good-sized jar, with directions, or for free sample write Hudson & Co., Inc., 149 and 151 West 36th St., New York.

THE PREVENTION OF POULTRY

DISEASES.

JOHN R. BOWIE.

Fowls are liable to be affected by a manuful purposes of leguminous ma Fowls are liable to be affected by a number of diseases and may also be infected by various kinds or parasites which live on the surface of the body and also in the crop, stomach or intestines, taking the nourishment which should be used to put on flesh or produce eggs and also cause irritation and inflammation.

The contagious diseases produced by animal and vegetable germs are the most important the poultryman has to consider in trying to keep his birds healthy. These germs and the parasites should be kept out preferably by preventive measures, although there

PRACTICAL INTENSIVE GARDEN PLANS.

Systems Which Bring Good Results JAMES B. MORMAN

By intensive culture a small holder makes the best use of his land, increasing the surface area while companion cropping is the most practical feature of intensive gardening. The following crop systems have given good results:

A Three Crop Combination.

Three Crops.—As soon as the land can be worked in spring, plant to early potatoes. When hilled the last time, plant sweet corn between the rows three feet apart, with occasional hills of winter squash. These two crops get a good start before potatoes mature. Dig potatoes when the tops are dead, so the digging may serve to cultivate the growing corn and squash. Broadcast with turnip seed, top dress with farm or chicken manure and thoroughly rake seed and fertiller into soil. Sweet corn winter squash and turnips are three good companion crops for fall use.

Another satisfactory combination

Another satisfactory combination after early potatoes is to plant sweet corn and winter squash, as previously described, with cauliflower or winter cabbage between the hills of corn. After potatoes are dug, plant to cowpeas, which gives three crops for table use, with cowpeas for soll improvement because of the nitrogen contained in the roots.

FENCING AND POSTS. Rail and Boad Fences Have Had Their 240.

Day.

P. K. EDWARDS.

Pigs and the board fences were the bane of our existence as boys, for no matter how securely we fastened the old boards the pigs would get out just of Mill—Meeting of Total Abstinence potash need not give concern, but the weakness of the fertilizer is the low content of the high priced element, nitrogen.

Use Care in Selection.

when we were starting for the swimming hole or going berrying. Now concerte posts and wire fencing have percome substitutes for the boards and ralls and once set up are fortunately

ralis and once set up are fortunately there to stay.

"But wire fencing is so expensive!" the reader will say. The reply to that is, "If you do not consider the lasting qualities of good heavy galvanized wire and the indestructibility of cement posts." The writer remembers putting a fifty-five inch woven wire fence around his garden some nineteen years ago, using chestnut posts set twenty feet apart. This fence is still standing and is to all appearances in excellent condition. Regarding the spacing of the posts around this garden, which bordered the highway and used a board fence with eight foot required 406 feet of fencing if we had used a board fence with eight foot post spacing, thirty more posts would have been required, and as these cost even in those days lo cents each, a saving of \$4.50 was effected. In this particular case the posts being of chestnut (eight feet long) the butts were painted with a creosote preparation and set three feet in the ground. The gate, corner and end posts were nine feet, set four feet in the ground and to the butts of each of these posts were spiked two four-foot strips of heavy plank-ing, one near the bottom, the other on the opposite side three feet higher up. These acted as anchors, preventing the nosts from being loosened when the

the opposite side three feet higher up. These acted as anchors, preventing the nosts from being loosened when the wire was tightened. On top of these anchors large stones were laid before the earth was replaced.

In using cement posts, which are estily made at home be sure to have the butts of the corner and end posts extra heavy and then no anchors are needed; also provide for two bolt holes in each post, one near the top, the other near the bottom, to be used for the bolts which hold the wooden strip to bolts which hold the wooden strip to wire is tapled.
In setting some 800 feet of poultry

fencing this past year the writer used modern heavy woven wire, with six foot cement posts set three feet in the ground. To these short posts were

little place and kept spreading until it covered my hands. My hands looked like they had been burned by fire and pealed off in large pieces until they were only raw flesh. I was told it was exemp. It itched and burned me so that I could not sleep at night. I tried all septs of eccema salves and one prescription after another but nothing gave me any relief until I tried Resinol Scap and Reginol flintment, and after the first application my hands never taked or burned again, and were well in one week. I want every sufferer from exema to know that they can find a cure in Resinol. (Signed) Miss filled Scatt, Misstead, Ga covered my hands, My hands looked

Physicians have prescribed Resimol for innelsed years, for all sorts of sidn troubles, pimples dandruff sores, placers, burns, wounds, and piles. Every arrights sells Resimol blaiment and Resimol Soap, but for trial size, free write to Dept. 2-R. Resimol, Baltimore Md., So not be decayed by multations.

NOANK

The Burnera class of the Baptist church gave a social Tuesday erening for the members and a lew friends.

The members of the Gannet club who met at the home of Dr. E. R. Kitch

bolted five wooden strips 3 and 4 inches, to which the wire was stapled. Many of the cement posts in this case had to have extra large butts on account of the hollows in the ground, which had a tendency to pull up the

posts.

Today when the price of labor is so high, the stout, easily built wire fence is an economical investment.

HENS ARE KEEPING

TO 2,000 EGG MARK. Made Net Gain in 17th Week of 117-Total of 2,042.

The hens in the international egg laying contest at Storrs are still laying right around 2,000 eggs a week. There was a net gain of 117 in the 17th week or a total production of 2.042 eggs. It is believed that with the approach of the natural breeding season and with more moderate weather conditions a considerably larger yield is to be immediately expected. Although at this writing the snow is still 18 to 24 inches deep in many places on the plant, the hens seem to be happy and it is of course the happy busy hen that yields the most eggs.

The 17th week developed a new division of laurels; in other words, new pens have broken into the game, and in the shakeup Connecticut pens got away with three places out of the first The hens in the international egg in the shakeup Connecticut pens got away with three places out of the first four. Dr. J. A. Fritchey, Harrisburg, Pa. was first for the week with his pen of Rhode Island Reds that laid 44 eggs. A pen of White Leghorns owned by Branford Farm of Groton was second with 42 eggs, and Frederick H. Benton's White Plymouth Rocks from Wallingford and Merrythought Farm's White Wyandottes from Columbia tied for third place with 41 eggs each.

reature of intensive gardening. The following crop systems have given good results:

Two crops.—Irish and sweet potatoes can be grown together. Plaint early as possible a late variety of potato in rows three feet apart; put the seed pieces eighteen or twenty inches apart in rows. After the pototoes have been hilled the last times, set out sweet potatoe slips in ridges between Irish potato in the light of the last times, set out sweet potatoe slips in ridges between Irish potato as companion crop.

Another two crop combination is sweet corn and cauliflower, the latter growing slowly and liking shade, the former growing rapidly in hot, moist weather, and in farm climates corn furnishes the shade which cauliflower riquires. Cauliflower plants should be started early in boxes of rich soil; the sweet corn should be sown in hills three feet each way, and when the cauliflower plants are large enough; the sweet corn should be sown in hills three feet each way, and when the cauliflower plants are large enough; the sweet corn should be sown in hills three feet each way, and when the cauliflower plants are large enough; the sweet corn should be sown in hills three feet each way, and when the cauliflower plants are large enough; the sweet corn should be sown in hills three feet each way, and when the cauliflower plants are large enough; the sweet corn should be sown in hills three feet each way, and when the cauliflower plants are large enough; the sweet corn should be sown in hills of winter equal to the corn in deep holes two or three feet apart and with both crops plant to early potatoes. When hilled the last time, plant sweet corn between the rows three feet apart, with occasional hills of winter squash. These two crops get a good start before potatoes mature. Dig potatoes when the tops are dead, so the digging may serve to cultivate the growing corn and squash. Broadcast with turnip seed top dress with farm or chicken manure and thoroughly rake seed and fertiller into soil.

Sweet corn witners are able to the dress wi First Ten in Connecticut.

CONVENTION OF RELIGIOUS EDUCATION ASSOCIATION.

International Gathering With Prominent Speakers to Be in Session at New Haven, March 4 to 8.

The International Convention of the Religious Education association meets in New Haven, Wednesday to Sunday, March 4th to 8th, as the guest of the city and of Yals university. The pro-gramme includes over 60 speakers of national reputation. The principal meetings are those upon the college problem, under the topic, The Relation of Higher Education to the Social Or-der, but there are numerous other meetings for Sunday school teachers, church workers, and others interested in moral and religious education. Delegates to the convention are com-

ing from colleges all over the United States and Canada, and it is expected that this will be the most representa-tive educational gathering ever held in New Haven. Elaborate preparations are being made by a large number of committees under the general leadership of Prof. Charles F. Kent. The Hon. John Q. Tilson is chairman of the committee on publicity for the

The Business

LIKE THE TANGO

The New Silks

Are distinctively different. They strike the high-note of the present mode, and in their barbaric elegance make a striking contrast to the more sombre effects of former seasons. We are now displaying many of the choice weaves which will be "the thing" for the Spring and Summer of 1914.

EGYPTIAN CREPE

A Far-Eastern weave, Oriental in character and coloring. Imagine a rough, irregular crope weave with the brilliant finish of a fine satin. It is 40 inches wide and is sold in patterns only for \$3.00 a yard.

PRINTED CANTON CREPE

A subtle, olinging, wriggly weave with beautiful draping qualities. The beautiful colorings form a wonderful contrast for the dainty printed designs which distinguish them. 40 inches wide and sold in pattern lengths only for \$2.00 a yard.

PUSSY WILLOW TAFFETA

This charming, soft-finished Taffeta which wen so much favor last season has been developed into one of the best of the printed silks. The newer shades are well represented in our display. It is 40 inches wide and sells for \$3.00 a yard.

INDESTRUCTIBLE VOILE

Looks like a cobweb - wears like iron. The wonderful filmy texture of this Voile belies its wearing qualities. It is inexpensive-here you have the best 40 inch Silk Voila for \$1.50 a yard and twenty different shades .to .choose
